

VOIPNOW PLESK MODULE

ADDS VOIP SUPPORT TO PARALLELS PLESK

VoipNow Plesk Module integrates Parallels Plesk Panel with VoipNow Professional in a single management interface. By combining the hosting industry's leading control panel with the hosted Unified Communications solution, hosting providers can offer complete communications services to businesses. VoipNow Plesk Module automates user management and dramatically simplifies the provisioning and delivery of voice and video services.

Account Replication

VoipNow Plesk Module effortlessly replicates existing Plesk accounts into VoipNow Professional or links Plesk users to existing VoipNow Professional accounts with only one click. Based on the administrator's preferences, the module can also automatically replicate new Parallels Plesk accounts. At the same time, VoipNow Plesk Module allows Parallels Plesk Panel clients to resell VoIP services.

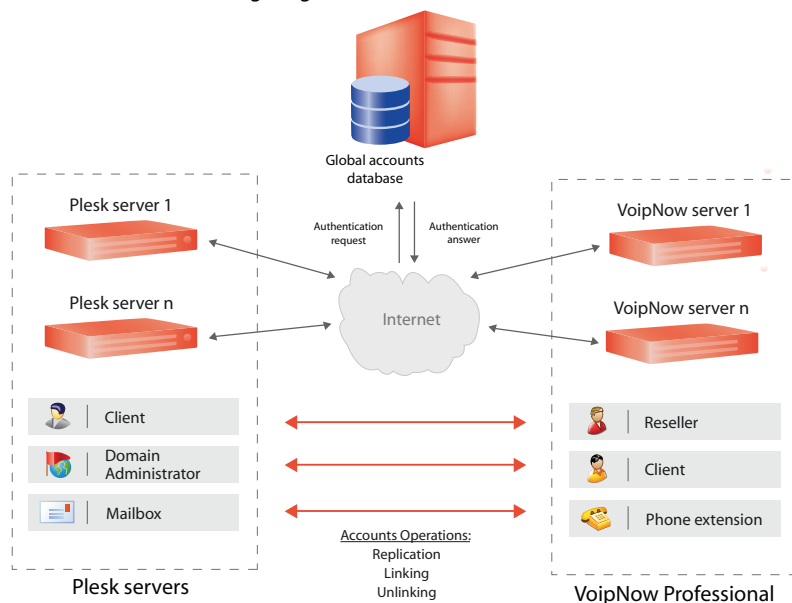

Interface Integration

Plesk Panel users with VoipNow accounts can easily switch between hosting and VoIP management with the help of a button available on all Plesk Panel pages. VoipNow has management concepts quite similar to Plesk Panel. Therefore, users can quickly learn how to use VoipNow's main features and settings.

Single Sign-On Technology

With the SSO (Single Sign On), server users who take advantage of the Plesk VoipNow integration need a single session to access both Plesk and VoipNow. Though anyone can directly log in to a VoipNow server, without accessing Plesk first, by using SSO, users need to remember only one set of credentials.

Single Sign On (SSO) / Direct API Connection

Easy to Install and Deploy

VoipNow Plesk Module is available for Plesk 8.4 and later running on Linux and UNIX. The product is also packed as a Virtuozzo application template.

Highlights

- Accounts are mapped to VoipNow Professional based on their level:
 - Plesk client ↔ VoipNow reseller
 - Plesk domain ↔ VoipNow client
 - Plesk mailbox ↔ VoipNow extension
- Automatic or manual account replication, based on predefined templates
- Replication queue and history reports
- Multiple Plesk servers can replicate accounts to a single VoipNow Professional infrastructure
- Global passport, only one login required when SSO is configured
- Comprehensive account statistics including the user's call activity, their subaccounts, etc, are directly integrated in the Plesk interface.
